## Eco-participation modulation

Eco-participation modulation criteria has applied to professional EEE according to the conditions below:

- For all EEE of categories 1 to 10 containing at least 20% plastic by mass:
  - ▶ Criterion "Incorporation of post-consumer recycled plastic":  
At least 20% by mass of all of the plastic in the appliance is derived from post-consumer recycled plastic;
- For all EEE of categories 1 to 10 containing at least 20% plastic by mass and containing flame retardants:
  - ▶ Criterion "Absence of bromine in plastic parts containing flame retardant":  
Absence of bromine in all plastic parts of more than 25 grams containing flame retardants, excluding electronic cards and power cables;

- For refrigerating appliances with a direct sales function, chest freezers, electronic displays, welding equipment, emergency lighting and printing systems:

- ▶ Criterion "Availability of spare parts": Existence of contractual documents providing for the availability of essential spare parts for the use of the appliance for a period greater than or equal to the following minimum period, for each equipment type eligible:
  - Refrigerating appliances with a direct sales function: 10 years;
  - Chest freezers: 15 years;
  - Electronic displays: 10 years;
  - Welding equipment: 15 years;
  - Emergency lighting systems: 8 years;
  - Printing systems: 6 years.

Where products are eligible for multiple modulation criteria, they are entitled to combine modulations according to the following terms: 1 fulfilled criterion = -20%, 2 fulfilled criteria = -30%, 3 fulfilled criteria = -40%.  
For more precisions about eligible products and required documentary evidence, please consult [the technical note about modulation criteria applying to Professional EEE](#).

Regulatory categories defined by Article R543-172-II of the French Environment Code:

**Cat. 01:** Temperature exchange equipment

**Cat. 02:** Screens, monitors, and equipment containing screens having a surface greater than 100 cm<sup>2</sup>

**Cat. 04:** Large equipment

**Cat. 05:** Small equipment

**Cat. 06:** Small IT and telecommunication equipment

**IMPORTANT:**

List of equipment is non-exhaustive (for more information on the equipment concerned, consult the [Notice to Producers](#) on 27 November 2014, or contact **ecosystem**).

In accordance with the provisions of [Article R543-172-III of the French Environment Code](#), electrical and electronic sub-assemblies intended to be connected to each other in a modular and reversible way\* by means of tangible or intangible joins are considered to be EEE within the scope of the contract (e.g.: replacement pump for industrial cleaning equipment...), except when they are sold to Producers of electrical and electronic equipment in which the said subassemblies are intended to be integrated (e.g.: ballast sold in OEM to a lighting manufacturer, specific engine sold in OEM to a pump manufacturer, pump sold in OEM to a suction system manufacturer for a dental treatment station, input/output module sold in OEM to a manufacturer of industrial PLCs...).

\*A join (excluding any bonding, welding or crimping) is considered reversible when it can be separated by mechanical actions, such as unscrewing, by simple and commonly used tools.
