

ecosystem contribution scale – Professional EEE

Eco-participation amounts applicable as from January 1st 2025

ECO-PARTICIPATION MODULATION

Eco-participation modulation criteria have applied to professional EEE according to the conditions below:

- For all EEE containing at least 20% plastic by mass and containing flame retardants:
 - **Criterion 1 PREMIUM "Absence of Bromine in plastic parts containing Flame Retardant (BFR)"**
absence of bromine in all plastic parts of more than 25 grams containing flame retardants, excluding electronic cards and power cables.
- For all EEE mentioned below:
 - **Criterion 2 PREMIUM "Availability of spare parts"**
for a period equal to the following period, for each equipment type eligible:
 - Refrigerating appliances with a direct sales function: 10 years;
 - Chest freezers: 15 years;
 - Electronic displays: 10 years;
 - Welding equipment: 15 years;
 - Emergency lighting systems: 10 years;
 - Printing systems: 6 years;
 - UPS (Uninterruptible Power Supply) < 50 cm: 10 years;
 - UPS (Uninterruptible Power Supply) ≥ 50 cm: 12 years;
 - Generating sets: 10 years;
 - Screwdrivers, drills, chisels: 17 years;
 - Valve gearmotors: 10 years.

- For all EEE containing batteries or accumulators:
 - **Criterion 3 PENALTY "Non-separable Battery";**
- For all EEE containing plastic resins:
 - **Super modulation:** "integration of recycled plastic" criterion generating a Premium calculated on the basis of the total mass of recycled plastic materials (RPM) incorporated into the equipment.

Prerequisite: for a RPM to qualify for a premium, it must be derived from the recycling of waste collected or supported under an extended producer responsibility (EPR) scheme.

2 levels of premiums are established according to the origin of the recycled material.

- For MRP from post-consumer waste, excluding food-grade resins the calculation base is established on the basis of €450/t excl. VAT, to be reduced to the mass of the equipment.
- For RPM from post-consumer WEEE, the calculation base is established on the basis of 540€/t excl. VAT to be reduced to the mass of RPM of the equipment.

The amount of the premium must be calculated reference by reference, in compliance with the rules of the OCAD3E technical note. The products concerned will have to be the subject of a pre-declaration and after validation by ecosystem, the declaration can be made at the same time as the declaration of marketed products.

For more precisions about eligible products and required documentary evidence, please consult the [technical note about modulation criteria applying to Professional EEE](#).

Family	Equipment types and examples (non-exhaustive list)	Regulatory category	Net weight (kg) or capacity (l)	Eco-participation code	Eco-modulation criteria			Reference amount excl. VAT / unit

Regulatory categories defined by Article R543-172-II of the French Environment Code:

Cat. 01: Temperature exchange equipment

Cat. 02: Screens, monitors, and equipment containing screens having a surface greater than 100 cm²

Cat. 04: Large equipment

Cat. 05: Small equipment

Cat. 06: Small IT and telecommunication equipment

IMPORTANT:

List of equipment is non-exhaustive (for more information on the equipment concerned, consult the [Notice to Producers](#) on 27 November 2014, or contact [ecosystem](#)).

In accordance with the provisions of [Article R543-172-III of the French Environment Code](#), electrical and electronic sub-assemblies intended to be connected to each other in a modular and reversible way* by means of fangible or intangible joins are considered to be EEE within the scope of the contract (e.g.: replacement pump for industrial cleaning equipment...), except when they are sold to Producers of electrical and electronic equipment in which the said subassemblies are intended to be integrated (e.g.: ballast sold in OEM to a lighting manufacturer, specific engine sold in OEM to a pump manufacturer, pump sold in OEM to a suction system manufacturer for a dental treatment station, input/output module sold in OEM to a manufacturer of industrial PLCs...).

*A join (excluding any bonding, welding or crimping) is considered reversible when it can be separated by mechanical actions, such as unscrewing, by simple and commonly used tools.
